Notes for the user

The Vaxiholster is simply worn by putting the strap around your neck and placing your right arm through as shown on the card

Draw up strap for a firm fit and tuck the surplus strap into your shirt or overalls to keep it out of your way.

In addition, if you have the belt with gun holder, the insert sleeve can be easily removed to use as a drench gun holder

Best technique for drawing the gun out of the holder is to place your thumb on top of the plastic holder and lift the gun with your fingers.
